

PCS Flow Couplings

The PCS Flow Coupling is a heavy wall tube used as an integral part of the tubing completion string.

The PCS Flow coupling is used to reduce the internal erosion effects caused by disturbances in the production flow stream. They are normally installed above and below safety valves, production profile nipples, sliding sleeves, etc

Flow Couplings are provided in all sizes, weights and material specifications for standard services, H₂S, and HP/HT conditions. We provide Flow Couplings in various sizes, weights and threads and in any configurations such as box x pin or pin x pin.

**Lengths of 3, 4 and 6ft
2 3/8" 27/8" 3 1/2" 4 1/2" and 5 1/2"**
